

GROUT X

Gypsum Cement

DESCRIPTION

GROUT X is high strength gypsum cement designed to set hard in approximately 15 minutes.

APPLICATIONS

Grout X can be used when cementing casing, pipe, pre-collars or unstable grounds/formations. It has applications for plugging lost circulation zones or used as a cement plug prior to wedging off.

ADVANTAGES

- Quick setting cement compared to standard GP cement
- Simple and easy to use

LIMITAIONS

- Water quality and temperature will affect the setting times
- Care should be taken when mixing and pumping that the Grout X doesn't set too early.

TYPICAL PROPERTIES

Physical Appearance	White powder
Specific Gravity	2.4

USAGE

Mix at a general ratio of 20kg GROUT X with 13l of potable water, mix until a smooth consistency. More water can be added for a thinner slurry and longer setting times, add more GROUT X for a thicker slurry and faster setting times.
