

Mid-Western S83 Demon Drill

Mini skid unit pictured is sold separately

Our line of S83 rock drills have been used in mining and construction projects across the world for decades. We have harnessed the intense power of the S83 drill and mounted the unit to a feed system so you no longer have to physically hold the drill. The result is a hard-hitting, powerful, efficient, rock drill with no operator fatigue. With so many applications, The Demon Drill is a great fit for quarries, geotechnical drilling companies, jacking and grouting companies, construction companies, utility companies, road crews, fencing companies, and more.

Features of the S83 Demon Drill

- Drill unit is completely pneumatic
- 2,302 beats per minute (when running at 90 PSI)
- 69.2 FT/LBS of energy per blow (90 PSI)
- Recommended air compressor size of 185 CFM
