New Extended Dome Carbide Design

The new Extended Dome carbide is a modified Hemispherical profile shape with a greater projection geometry and a taller dome section. The Extended Dome carbide offers longer insert life, faster penetration rates and longer periods between sharpening intervals.

HEMISPHERICAL

- >> Hard Grade Composition
- >> Normal Penetration Rate
- >> Average Service Life
- >> Standard Dome Profile

EXTENDED DOME

- >> Hard Grade Composition
- >> Faster Penetration Rate
- >> Longer Service Life
- >> Suitable for Tunneling Bits
